

Forklift Fork Positioner

Fork Positioner for Forklift - A fork positioner is an apparatus constructed out of top quality materials designed to endure the most challenging procedures and work environments. This particular piece of equipment enables the person driving to be able to maneuver the forks hydraulically without leaving the seat. Side shifting models have the added ability to be able to laterally position the arms or the entire load in order to facilitate more exact carrying and position in a quicker and much more efficient method.

The only one of its kind fork pocket design could enable operators to securely swing the unit's forks without any worry of destroying the positioning cylinders. This could allow the worker the choice to either perform independent or simultaneous fork movement, dependent upon the job requirement. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be converted into blade positioners on existing units.
